

MCW SERIES CRANE SCALES:

Load cell proof test

Load cell breaking test strength
500% of max capacity
400% of max capacity for the model MCWHU35t

The value represents the load cell breaking strength achieved during static testing according to the FEM1001 standards.

This value does not represent a reference for the security of the instrument and does not authorize the user to load the instrument in excess of the max capacity.

Before using the instrument the user must read and follow with the greatest attention the use and maintenance instructions as contained in the safety manual provided with the instrument.

All MCW crane scale conforms to the UNI EN 13155:2009 and to the Machine Directive 2006/42/CE.
